

Department of Decision Sciences

Statistics Seminar

Convex Bodies and Gaussian Processes

Richard Vitale

Department of Statistics, University of Connecticut

Thursday, 20 January 2011

2:30pm Room 35 Via Sarfatti 25 Milano

Abstract

In tandem with the preceding short course, the seminar will present several topics that combine geometric and probabilistic ingredients, with special reference to geometric convexity and Gaussian processes. We will attempt in particular to show how this interaction has provided novel insights in both areas.
